DFND Unveils Seamless Mesh Wool System at SHOT Show

Advanced Wool engineered for heat management, durability, and mission-ready comfort.

Las Vegas, NV — [SHOT Show 2026] — DFND, the performance apparel brand trusted by athletes, operators, and professionals who demand more from their gear, will debut its Seamless Mesh Wool System at SHOT Show. Built for high-output environments and prolonged wear, the new system redefines wool performance through advanced seamless construction, targeted mesh ventilation, and DFND's uncompromising durability standards.

At the core of the Seamless Mesh Wool System is premium USA grown fine micron wool, selected for its natural temperature regulation, odor resistance, and next-to-skin comfort. DFND elevates these inherent benefits with engineered mesh zones that allow body moisture to move away from the skin, all while also helping to hold a layer of heat close to the skin.. The result is a next-generation base layer that performs in extreme cold and harsh conditions.

Unlike traditional wool garments that rely on seam free construction, DFND's seamless approach reduces friction points, eliminates bulk, and enhances long-term comfort under body armor, packs, or outer layers. The fabric stretches and recovers with the body, delivering a locked-in fit that moves through training, work, and extended missions without compromise.

“Wool has always been one of the most functional fibers on the planet,” said Steve Burnett [President] at DFND. “Our goal was to engineer it for modern performance—lighter, stronger, more breathable, and more durable—without losing what makes wool essential. The Seamless Mesh Wool System is built for people who don't get to choose their conditions.”

Designed for protection in cold environments, the Seamless Mesh Wool System excels as a standalone layer and thermal foundation in colder temperatures. Naturally antimicrobial and quick-drying, it stays comfortable during multi-day wear, making it ideal for military, law enforcement, outdoor professionals, and serious athletes alike.

DFND's Seamless Wool is engineered to withstand repeated, hard-use wash cycles—solving one of wool's most common failure points—by reinforcing fiber integrity and seamless construction to maintain fit, structure, and performance over time.

DFND will showcase the Seamless Mesh Wool System at SHOT Show [Booth # 20139-VE2], offering attendees a firsthand look at the construction, fit, and performance that set this product apart.
