

Ballistol multi-purpose oil in gun care

Skin-friendly and environmentally friendly

Gun care is a subject on which countless different tips, opinions and myths exist. The reason for the multitude of different views is, among other things, the different uses of guns and the corresponding requirements. Of course, professional gun owners care for their weapons differently than collectors, and sport shooters differently than hunters.

For hunting, service and sporting weapons, Ballistol Multi-purpose Oil is the care product of the first hour. Since 1904, i.e. for almost 120 years, the unchanged formula has proven itself with users worldwide. It is biodegradable and therefore environmentally friendly. What makes it unusual compared to other oils is that it is food-safe, skin-friendly and even dermatologically tested with "Very Good" (source: www.ballistol.de). Since there are always other voices to be heard, it should be expressly pointed out again that Ballistol Multi-purpose Oil cannot resinify due to its chemical composition.

Rain and condensation damage any wooden shaft. The wood becomes dull and swells, in the dry heat it shrinks again, becomes cracked and brittle. Ballistol Multi-purpose Oil regenerates the shaft wood, protects it from moisture and drying out. The product is also ideal for leather care of straps, belts, holsters and tactical gloves. Well-protected weapons can survive many months in the gun cabinet with this classic care product.

Ballistol Multi-purpose Oil creeps into the finest cracks, cleans and removes powder residues, lead, copper and tombac deposits. It neutralises and dissolves even aggressive residues without causing damage. When shot, a residue remains from the projectile and the combustion of the ammunition. This forms a thin film which increases from time to time until the gun suddenly "inexplicably" scatters.

Ballistol Multi-purpose Oil helps this evil away, without brushing, scratching or scraping. Simply spray it into the barrel and the chamber, let it take effect, wipe a few times with tow or cleaning felt and everything is like new again. In case of heavy soiling and smearing, the process should be repeated several times. The alkaline Ballistol Multi-purpose Oil also ensures problem-free cleaning and preservation of black powder weapons such as muzzle-loaders or signal or alarm pistols and revolvers.

Firearms Maintenance Equipment

Silencer Cleaner

The silencer cleaner dissolves and neutralises combustion residues. Silencers are particularly difficult to clean if they cannot be dismantled. Although carbon silencers with narrow sections on fins and small holes improve the performance of the silencer, the silencer cleaning is much more difficult. With Ballistol silencer cleaner, the residues in the dirty silencer can easily be cleaned out. Suitable also for use in an ultrasonic cleaner.

SELF-CLEANING • ODOURLESS • GENTLE ON MATERIALS

Ballistol GunCer + RoblaSolo MIL + FlexClean

Reliable and proven from barrel to closure to shaft, BALLISTOL offers various care products for weapon care. With Robla Solo MIL you get a tested and unsurpassed barrel cleaner for all guns. GunCer gun oil is suitable for all rifles and handguns. Ceramic particles optimize the functional performance and shooting accuracy and reduce wear considerably. The FlexClean gun cleaning rope with built-in caliber-optimized pressure balls and sponges ensures high cleaning performance.

About BALLISTOL

BALLISTOL has been manufacturing the tried-and-tested multi-purpose oil for 120 years and is a successful company with a pioneering spirit and a high degree of innovation, which exports to more than 60 countries worldwide. The continuously expanded portfolio over the years consists mostly of self-developed and self-produced products. In addition to the three great classics Ballistol Multi-purpose Oil, Ballistol Animal and Neo-Ballistol home remedy, the range has grown to a technology series, weapon care series, bicycle care series and many more. Today the product range of BALLISTOL embraces more than 80 products. Furthermore, in recent years, regular investments have been made in the continuous optimization of process flows as well as in the areas of further development and innovation.
