

For Immediate Release

Andersonville, TN (December 18, 2025) — Launching at SHOT Show, the Mepro CABS — Co-Witness Adjustable Back-up Sights — Made In The U.S.A. Redundancy can be a good thing, especially if your red-dot optic goes down. The Mepro CABS will keep you in the fight when that happens. It is much better to be prepared rather than finding yourself in a situation where you wish you were.

Flip the all-metal sights up when you need them and fold them down when you don't. **Designed for 100% true co-witness, the Mepro CABS ensures seamless target transition and absolute reliability.**

Made in the U.S.A., it features a dual-aperture rear sight and a tritium enhanced front sight. These features provide fast, accurate target acquisition in any situation — day or night — 24/7/365.

Designed and built for reliability, it's the assurance every shooter can depend on. Always On! Always Ready!

Proven Advantages:

- Perfect alignment with 1.5" red-dot optics
- Durable heavy-duty metal construction
- Tritium front sight for low-light illumination
- Self-powered. No batteries needed
- Dual-aperture rear sight
- Made in the U.S.A.

Stop by Booth #20039 and check out our full line of MVO™ optics along with the other new products from Meprolight®.
