

10Scan the All-in-One Self Service LiveScan NFA & Suppressor Kiosk Solution built from the ground up by and for FFL/SOT Dealers to streamline the entire NFA process from start to finish.

Event: SHOT Show 2026

Location: Las Vegas, NV

Date: January 20-23 2026

TenScan LLC, developer of the 10Scan biometric software platform, announces its all in one self service LiveScan and NFA eForm solution designed for both kitchen table FFLs and high volume brick and mortar FFL/SOT dealers. 10Scan streamlines the entire NFA workflow by allowing dealers to capture LiveScan fingerprints, convert FD-258 fingerprint cards to EFTs, collect customer biographical data and photos, and auto-fill, validate, and certify NFA eForms — all within a single interface. From suppressor sale to submitted eForm, the process can often be completed in 15 minutes or less. Unlike other systems that lock customer data into proprietary platforms, 10Scan ensures dealers retain full ownership of their customer relationships. Running on a Windows based PC or Touch Screen tablet.

Dealers can create or scan a customer once and reuse the same EFT for future submissions without additional charges, improving efficiency while reducing costs. Dealers attending SHOT Show are invited to visit the 10Scan booth for live demonstrations and to learn how 10Scan helps simplify NFA submissions, reduce errors, and deliver a professional, self-service experience.

We're excited to unveil major news at SHOT Show — our livescan fingerprinting process is transforming NFA fingerprint acquisition, reducing capture time by up to **80%** while improving efficiency and consistency for FFL and SOT dealers.

About TenScan LLC: TenScan LLC developer of “10Scan” is a Michigan based software company focused on building secure, modern biometric and workflow solutions for the firearms industry. 10Scan is designed exclusively for FFL and SOT dealers to streamline NFA submissions while maintaining dealer control, accuracy, and compliance.
