Harmoni to Showcase Next-Generation Factory Orchestration System at Shot Show 2026

AKRON, Ohio – January 2, 2026 – Harmoni, a manufacturing technology company redefining shop floor connectivity, today announced it will exhibit at Shot Show 2026. The company will showcase its Factory Orchestration System, a platform designed to move beyond traditional monitoring by unifying machines, people, and data into a single intelligent operating layer. Harmoni will be located at Booth #80227 in the Caesars Forum in Las Vegas, Nevada.

Harmoni's presence at Shot Show highlights a shift in how manufacturers approach production data. While traditional solutions often focus solely on machine status, Harmoni's Factory Orchestration System provides complete factory floor visibility. By combining real-time machine data and alerts with employee time tracking and deep ERP integrations, the platform offers context that isolated systems lack. This integration allows manufacturers to view costing, schedules, and production performance alongside machine activity, offering unparalleled insights into manufacturing processes.

"Harmoni has introduced an entirely new paradigm for manufacturing," said David Caputo, Co-Founder of Harmoni. "Factory orchestration brings machines, people, and data into one integrated system that drives real-time action. We're proud to demonstrate what a truly connected factory can achieve."

The system is built to address the complex challenges modern manufacturers face regarding efficiency and compliance. By leveraging RFID-enabled hardware and AI-powered assistants, Harmoni automates the coordination of workflows and streamlines operator tasks. This ensures that critical engineering and quality data reach the front line at the exact moment it is needed. The result is a system that not only monitors production but actively orchestrates it, helping leadership improve throughput, reliability, and on-time delivery.

Attendees visiting Booth #80227 will see how the platform serves as an intelligent operating layer for the factory. Demonstrations will illustrate how the system connects disparate elements of the shop floor—machines, materials, and personnel—to create a synchronized production environment. This level of coordination is essential for manufacturers looking to reduce waste, optimize budgets, and maintain competitiveness in a demanding market.

About Harmoni

Harmoni is a manufacturing technology company delivering an innovative factory orchestration system – an intelligent operating layer that unifies machines, people, materials, and data across the factory floor. Built from the ground up with RFID-enabled hardware, deep integrations with ERP and other factory systems, AI-powered assistants, and robust automation tools, Harmoni enables manufacturers to transform their operations with real-time intelligence and control. The Harmoni platform coordinates workflows, streamlines operator tasks, and ensures critical engineering and quality data reach the front line. Based in Akron, OH, and New York, NY, Harmoni works with manufacturers to improve throughput, reliability, and on-time delivery.
