

## **Digimation Unveils LiveScenarios™ — A Breakthrough in Real-Time De-escalation Training**

**ORLANDO, Fla. — January 20, 2026** — Digimation, developers of the DART simulation training platform, today announced the launch of LiveScenarios™, a patent-pending simulation technology that brings real-time human interaction into law enforcement and security training environments, solving one of the most persistent problems in scenario-based training.

“For decades, trainers have relied on video scenarios to teach de-escalation, but the truth is, they’ve never really worked,” said David Avgikos, President of Digimation. “Pre-recorded video can’t hear you. It can’t think or respond. So, they can’t prepare you for real-world conversations that can prevent use-of-force incidents.”

Unlike traditional simulators that rely on pre-recorded video clips, LiveScenarios interact with the trainee in real time. This breakthrough allows for open-ended, unscripted conversation—giving officers, security staff, and healthcare workers the opportunity to practice communication and de-escalation techniques in a dynamic, responsive environment.

“An important aspect of LiveScenarios is how customizable they are,” continued Avgikos. “Instead of generic situations that may or may not be relevant, training becomes laser focused on the specific needs of a department.”

Developed for use with Digimation’s DART, DART+, DART MAX, and DART MIL simulation platforms, LiveScenarios are designed to improve outcomes in encounters involving distressed individuals, mental health crises, or potentially volatile situations.

Key benefits of LiveScenarios include:

- True two-way interaction – everything you do or say matters
- Unlimited scenario variations – no branching script limitations
- Easily change environments – everything is customizable; location, time of day, even the weather
- Realistic stress training for communication, crisis response, and de-escalation
- High replay value – LiveScenarios can be run over and over again, building on lessons learned in previous training

LiveScenarios are available now. Agencies interested in seeing the technology in action can schedule a demonstration at [www.dartrange.com/demo](http://www.dartrange.com/demo).

### **About Digimation**

Digimation is a leading developer of innovative simulation training solutions leveraging leading-edge technology. The company's DART line of firearms training simulators offers frequent, effective marksmanship, tactical, and scenario-based training. Widely adopted by law enforcement agencies, military units, and commercial entities, DART simulators set industry standards for capability, realism, and course-building tools, which enable our customers to tailor courseware to meet specific mission objectives. Discover more about our transformative solutions at [dartrange.com](http://dartrange.com).
