XGO® Introduces Scout: The Lightweight Foundation of Its New Mission-Driven Layering System

First in. Built to prepare the way.

Southern Pines, NC — January 2026— XGO®, a leading manufacturer of U.S.-made performance and flame-resistant apparel for the U.S. Military, Law Enforcement, and First Responders, today announced the launch of **XGO® Scout**, the lightweight foundation of its newly reimagined, mission-driven layering system.

Scout, long known as XGO®'s Phase 1 base layer, carry's forward the same proven performance while introducing a name rooted in military doctrine. In every operation, the Scout moves first—fast, light, and alert—setting conditions for everything that follows. XGO® Scout is built to serve the same role within the system.

Designed as a next-to-skin layer, Scout regulates body temperature, manages moisture, and maintains comfort under armor or load-bearing equipment during high movement and high heat. Engineered to disappear when worn, it allows the warfighter to focus on the mission—not the gear.

“Scout represents the beginning of the mission and the foundation of protection,” said **Houston Brady, Director of Marketing/Sales at XGO®**. “It is the layer that prepares the way for everything above it, just as a Scout prepares the way for the force.”

XGO® Scout is proudly **Berry Amendment compliant** and **100% made in the USA**, manufactured at XGO®'s production facility in Candor, North Carolina. While the name has evolved, the materials, construction, and performance trusted by professionals for decades remain unchanged.

Scout marks the first step in XGO®'s broader transition from numeric phase designations to a mission-based naming structure designed to better reflect how layers are used in real-world operations.

This is where the system begins. This is where the mission begins. **XGO® Scout — First in. Foundation of protection.**
