XGO® Introduces Parapet: The Last Line of Defense in Its Mission-Driven Layering System

Built to hold when the fight turns cold.

Southern Pines, NC — January 2026 — XGO®, a leading manufacturer of U.S.-made performance and flame-resistant apparel for the U.S. Military, Law Enforcement, and First Responders, today announced the launch of **XGO® Parapet**, the heavyweight cold-weather layer in its newly reimagined, mission-driven layering system.

Parapet replaces what customers have long known as XGO®'s Phase 4 base layer, carrying forward the same proven insulation and durability under a name grounded in military architecture. In fortifications, the parapet forms the protective wall that shields defenders from exposure and attack. XGO® Parapet is engineered to serve that same purpose in extreme cold environments.

Designed for maximum thermal protection, Parapet delivers deep insulation while maintaining comfort during prolonged exposure. It is built for the moments when conditions deteriorate, movement slows, and the environment becomes as much a threat as the mission itself.

“Parapet is the layer that stands when everything else has already been tested,” said **Houston Brady, Director of Marketing/Sales at XGO®**. “It represents the final barrier of protection—engineered for operators who can’t afford to fail when the cold is at its worst.”

XGO® Parapet is proudly **Berry Amendment compliant** and **100% made in the USA**, manufactured either at XGO®'s production facility in Candor, North Carolina. While the naming has evolved, the materials, construction, and cold-weather performance trusted by professionals for decades remain unchanged.

Parapet marks the final defensive position within XGO®'s mission-based layering structure—designed to hold the line when the mission demands endurance above all else.

When the cold presses hardest, Parapet holds. **XGO® Parapet — Your last line of defense.**
