XGO® Introduces the Citadel Collection: The Fortress That Endures

The pinnacle of performance protection.

Southern Pines, NC — January 2026 — XGO®, a leading manufacturer of U.S.-made performance and flame-resistant apparel for the U.S. Military, Law Enforcement, and First Responders, today announced the launch of **XGO® Citadel**, its performance-focused pinnacle collection engineered for extreme cold and sustained exposure.

Citadel stands apart within XGO®'s mission-driven layering system. In military fortifications, the citadel is the inner stronghold—the last structure built to endure when all outer defenses have been tested. XGO® Citadel is engineered to fulfill that same role, providing uncompromising insulation, durability, and resilience when conditions exceed conventional layering limits.

Designed for prolonged cold-weather operations, Citadel delivers advanced thermal retention while maintaining structural integrity under extended wear. It is built for moments when the mission does not pause, movement slows, and failure is not an option.

“Citadel represents the highest level of performance protection we offer,” said **Houston Brady, Director of Marketing/Sales at XGO®**. “It is not simply another layer—it is the stronghold operators rely on when every other defense has already been pushed to its limit.”

The XGO® Citadel collection is proudly a mix of **TAA, and Berry Compliant**, cold weather solutions manufactured either at XGO®'s production facility in Candor, North Carolina or a certified TAA Compliant country.

Citadel serves as the final measure of endurance within XGO®'s performance lineup—engineered to stand firm when the mission demands absolute resilience.

When all else is tested, Citadel endures. **XGO® Citadel — The fortress that endures.**
