

FOR IMMEDIATE RELEASE

B.O.S. Lock Launches Fusion, the First Biometric Slide Lock with Light and Laser

Dunedin, FL — [January 8th] — [B.O.S. Lock](#) today announced the launch of the **B.O.S. Lock Fusion**, the next evolution of its biometric slide-lock platform and the first solution to integrate biometric access control with a built-in tactical light and laser in a single device.

Fusion is designed for responsible firearm owners seeking authorized-user-only access without sacrificing readiness or functionality. The device secures the firearm until unlocked by an approved user, then immediately enables full defensive capability.

“The fusion is the next evolution of our belief that gun owners shouldn’t have to compromise between a safety product that truly prevents unauthorized access and one accessible in under a second,” said **Keith Bombaugh, Founder of B.O.S. Lock**. “Gun owners have historically had to choose between secure storage and functional readiness. Fusion removes that compromise by delivering fast, authorized access alongside integrated illumination and targeting.”

Built for Authorized Access and Real-World Use

The B.O.S. Lock Fusion builds on the company’s patented biometric slide-lock design, incorporating feedback from retailers, instructors, and consumers.

Key features include:

- **Authorized-User-Only Operation:** Biometric locking ensures the firearm can only be unlocked and operated by approved users.
- **Rapid Access:** Unlock and chamber in under a quarter of a second.
- **Integrated Light and Green Laser:** Eliminates the need for separate accessories while maintaining a streamlined profile.
- **Automatic Activation:** Light and laser engage immediately upon unlock based on user settings.
- **Single-SKU Compatibility:** One model supports full-size, standard, compact, and subcompact pistols.
- **No Gunsmithing Required:** Installs without permanent firearm modification.

Availability

The B.O.S. Lock Fusion will be officially unveiled at NSSF’s SHOT Show, with initial production scheduled for Q1.
