

## SHAW ARMAMENT UNLEASHES THE CERBERUS GRT AT SHOT SHOW 2026

### MAGNUM-RATED DURABILITY MEETS ADVANCED FLOW-THROUGH TECHNOLOGY IN THE ULTIMATE .30 CALIBER SUPPRESSOR

**LAS VEGAS, NV – January 20, 2026** – Shaw Armament, a leader in precision firearm manufacturing and advanced suppressor technology, is proud to announce the release of the **Cerberus GRT**, the heavy-hitting anchor of its next-generation suppressor line. Built to tame the most powerful cartridges on the battlefield and the range, the Cerberus GRT combines Inconel durability with Shaw's signature Gas Reduction Technology (GRT) to deliver recoil management and sound suppression without the toxic blowback.

The Cerberus GRT is engineered for those who refuse to compromise on power or protection. At **7.5 inches** in length and weighing **17.8 ounces**, it offers a density-to-durability ratio previously impossible with traditional manufacturing. Like its 5.56 counterpart, the Cerberus GRT is constructed entirely from **Inconel 625** using monolithic DMLS (Direct Metal Laser Sintering) 3D-printing. This joint-free architecture allows it to withstand the extreme pressures of magnum calibers—rated up to **.300 Norma Magnum**—while remaining full-auto rated for 7.62 platforms.

"We took the flow-through benefits of our GRT system—zero backpressure, reduced bolt velocity, and cleaner operation—and scaled them up for long-range precision and belt-fed heavy machine guns."

The proprietary **Gas Reduction Technology (GRT)** features a complex coaxial blast chamber that vents expanding gases through an outer path, significantly reducing the recoil impulse and keeping noxious fumes away from the shooter's face. The **1.62-inch** diameter ensures maximum internal volume for superior decibel reduction at the ear.

True to Shaw Armament's commitment to versatility, the Cerberus GRT features industry-standard **HUB compatibility (1.375x24)**, allowing users to utilize their preferred mounting systems. It ships with a **5/8x24 direct thread mount**, making it ready for immediate deployment on the most popular .30 caliber rifles.

The Cerberus GRT is available now for order by dealers and distributors attending SHOT Show 2026.

**About Shaw Armament Systems** Based in **Powder Springs, GA**, Shaw Armament Systems specializes in precision manufacturing and firearms components, delivering cutting-edge solutions for military, law enforcement, and civilian shooters.
