Arsenal Displays the SAM7K-28 SBR with New Precision-Machined 1913 Picatinny Attachment Aluminum Stock at SHOT Show 2026

Las Vegas, NV – Arsenal, Inc. announces the SAM7K-28 will be on display at the 2026 SHOT Show — the SAM7K platform configured as a short-barreled rifle (SBR) and released with a new precision-machined aluminum buttstock that secures to the rifle using a 1913 Picatinny attachment interface. Originally released in October 2025, the SAM7K-28 will be displayed for the first time following the enactment of the One Big Beautiful Bill Act, which eliminated the NFA tax stamp fee. SHOT Show 2026 is the perfect opportunity to check out these models in person. The SAM7K-28 pairs Arsenal’s proven SAM7K model in 7.62x39mm with a purpose-built tactical stock engineered and manufactured in-house to deliver the strength, fit, and ergonomics required for a compact SBR.

**The SAM7K advantage**

The SAM7K-28 continues Arsenal’s legacy of durable, precision rifles: hammer forged then milled receiver construction for rugged strength and consistent tolerances; an 8.5" cold-hammer-forged, chrome-lined barrel for durability and repeatable accuracy; FIME Group’s enhanced, reliable, refined fire control components; and fit and finish that meets professional standards. These characteristics make the SAM7K an ideal candidate for a short-barreled configuration where mechanical integrity matters most.

The Stock

Central to the SAM7K-28 is Arsenal’s new CNC-machined aluminum buttstock assembly. Key attributes:

- **Precision CNC machined** single-piece aluminum body for dimensional accuracy and strength.
- **1913 Picatinny attachment interface** used to securely mount the stock to the rear of the rifle.
- **Lightweight tactical design** that improves handling while preserving structural integrity.
- **Ambidextrous cheek rest** for consistent sight picture and shooter comfort.
- **Four non-rotating QD sling ports** for dependable sling attachment in multiple configurations.
- Protective rubber butt pad for comfort and retention.

Manufactured in-house to tight tolerances, the stock provides mechanical stability and ergonomic improvements that make the short-barreled SAM7K practical and user-friendly.

Finishes & SKUs

The SAM7K-28 SBR ships with factory-matched furniture in four finishes.

- **Black** — SAM7K-28
- **Plum** — SAM7K-28P
- **OD Green** — SAM7K-28G
- **Gray** — SAM7K-28GY

Each SKU includes color-matched handguard, pistol grip, buttstock, and the 10-round magazine for a coordinated, factory appearance.

What's included & compatibility

Included with each SAM7K-28: FIME enhanced fire control group, sling (color varies by finish), cleaning kit, cleaning rod, oil bottle, thread protector, and one 10-round magazine (color matched to furniture). The SAM7K-28 is compatible with Arsenal's SM-22 optic mounts, muzzle

devices, extended magazines — all sold separately. It also fits perfectly in the Eternity Universal Pick-and-Pluck hard case. Product images may show optional accessories.

Availability & compliance

The SAM7K-28 SBR package is available through authorized Arsenal dealers and FFL retailers. Inventory varies by dealer — contact your local dealer for availability. Ownership and transfer of

SBRs are subject to the National Firearms Act (NFA) and local law; purchasers must comply with all applicable transfer, registration and approval procedures.
