X Ordnance Unveils the X1-15 — The Fastest AR Takedown in the World

Las Vegas, NV — **SHOT Show 2026** — X Ordnance proudly announces the debut of the **X1-15**, a groundbreaking AR-platform firearm engineered with a **revolutionary pinless takedown system** that allows the upper and lower receivers to separate in a matter of seconds.

Designed for speed, adaptability, and ease of use, the X1-15 eliminates traditional takedown pins, enabling operators to rapidly disassemble the rifle for **transport, cleaning, maintenance, or caliber changes** without tools. This innovation dramatically reduces downtime while increasing flexibility for professional users, enthusiasts, and builders alike.

“The X1-15 was built to solve a real problem in the AR market,” said a spokesperson for X Ordnance. “We wanted a platform that could adapt instantly—whether you’re breaking it down for transport, cleaning it at the range, or swapping uppers to run a different caliber. The result is the fastest AR takedown system in the world.”

The pinless architecture maintains strength, alignment, and reliability while delivering unmatched convenience. By allowing near-instant separation of the upper and lower receivers, the X1-15 offers a new level of modularity without compromising performance or durability.

The **X Ordnance X1-15** will be showcased at **SHOT Show 2026** in the **New Product Center**, where attendees can see firsthand how the platform redefines AR takedown speed and versatility.
