Keyport Announces Kickstarter Launch of Versa58, the First Truly Modular 58mm Everyday Carry System

Las Vegas, NV — Keyport announces **Versa58**, a modular 58mm everyday carry system designed to rethink how compact pocket tools are built, used, and evolved over time. By introducing a **non-destructive upgrade path**, Keyport allows users to enhance their favorite 58mm tools without the risk of permanent modification. The [Versa58 campaign](#) will launch on Kickstarter on **January 20, 2026 at 10:00 AM PT**.

At a Glance: The Versa58 Kickstarter Launch

- **What is the Versa58 system?** A patent-pending, modular platform that allows users to build, swap, and reconfigure tools around a compact **58mm standard**.

- **How does the modularity work?** It uses **MagMount Plates** for quick-connect standalone tools and a proprietary **Interface Plate** for **non-destructive upgrades** to compatible 58mm Swiss Army multitools.
- **Where can I find the Versa58 Kickstarter campaign?** The official campaign page with a launch preview is located at <https://www.kickstarter.com/projects/keyport/versa58-the-pocket-icon-you-know-unlocked-with-modularity>.
- **When does the Kickstarter launch?** The campaign begins **January 20, 2026, at 10:00 AM PT** and will last 30 days.
- **When will the products ship?** Initial shipping for Kickstarter backers is estimated to begin in **August 2026**.

Designing for Change in Everyday Carry

Traditional multitools are built around permanent configurations, regardless of changing needs, environments, or restrictions. Versa58 takes a modular approach by separating capability from permanence.

With Versa58, users can:

- Carry only the tools they need for a given context
- Reconfigure their setup without replacing the entire tool
- Add mechanical and digital tools over time
- Build standalone magnetic tools, keychain tools, or hybrid pocket setups

This modular approach reduces redundancy, extends product life, and allows a single carry system to adapt across work, travel, and daily life.

Defining a New Category in Everyday Carry

Versa58 is the **first modular system** designed around the **58mm standard**, enabling users to build, swap, and reconfigure tools across a single, compact platform. Instead of committing to a fixed toolset, users can assemble standalone tools, keychain tools, or pocket configurations that evolve over time.

“For years, people have treated everyday carry as a fixed decision you make at the point of purchase and live with,” said **David Cooper, President of Keyport**. “When circumstances change, you replace the tool. We are challenging that assumption. Versa58 exists because tools should be **adaptable systems, not static objects**, especially in a world where how, what, and where you carry changes constantly.”

Core Technology: MagMount & Interface Plates

At the center of the Versa58 ecosystem is a duo of patent-pending innovations:

- **MagMounts:** Keyport’s magnetic quick-connect architecture that allows tools to be assembled and reconfigured in seconds without additional hardware.
- **Interface Plates:** A proprietary design that enables Versa58 modules and scales to complement compatible 58mm Swiss Army multitools with plastic (Cellidor) scales—allowing for non-destructive, reversible upgrades.

“The 58mm format is iconic because it strikes a rare balance between size and usefulness,” said Josh Downes, Founder and Chief Designer of Keyport. “Our goal was not to reinvent that balance, but to extend it. Versa58 adds modularity so people can refine their carry over time instead of replacing it.”

Featured Innovations at Launch

The Versa58 system includes a growing set of modular tools designed for everyday utility, including:

- **Pocket Flare Mini Flashlight:** A flat, ultra-compact mini LED flashlight with low beam, high beam, and a distinctive **lamp mode**.
- **Mini Pen (Aluminum or Titanium):** A premium precision mini pen using replaceable German-made **Troika refills**.
- **USB-C 3.0 Flash Drive:** Available in 64GB or 256GB capacities for **integrated digital storage**.
- **Clip Scale (Aluminum or Titanium):** Adds a true pocket clip while preserving access to the accessory slot and keychain loop.
- **MagMounts and Interface Plates:** The “connective tissue” for building standalone tools, keychain tools, and modular pocket setups.

***Disclaimer:** Keyport is not affiliated with or endorsed by **Victorinox AG** or any of its trademarks, including “**Swiss Army**.” Versa58 is a patent-pending Keyport platform designed to work independently or to complement compatible **58mm Swiss Army multitools**.*

Launch Details

The Versa58 Kickstarter campaign will run for 30 days, with shipping estimated to begin in **August 2026**. Kickstarter will serve as the initial commercialization path ahead of broader retail and distribution availability.

About Keyport

Keyport develops **highly customizable everyday carry platforms** built for a world that never stays the same. Our system integrates keys, tools, tech, and a privacy-first lost-and-found service into a **single, pocketable solution that reconfigures in seconds**. From boardroom to backcountry, Keyport products are designed for modern life, keeping everyday carry organized, adaptable, and ready for change. The company has been featured by national and international media including **Discovery Velocity’s Tech Toys 360**, **RECOIL Magazine**, **Military.com**, **Forbes**, **CNN**, and **WIRED**.
