## CUSTOM GUN BARRELS

Since 1948, Douglas Barrels' premium ultra-rifled gun barrels have been synonymous with precision, accuracy, and dependable performance. Each gun barrel starts with high-quality stainless steel or chrome moly and is heat-treated to improve durability to withstand high-volume shooting and minimize variance over the lifetime of the barrel. Using our unique carbide push-button method to create the specified rifling, customers find that a premium Douglas Barrels' barrel provides shooters with unmatched levels of accuracy. All of our barrels are made in America and are manufactured from start to finish in our original West Virginia facility.

### WHY DOUGLAS BARRELS INC.

## UNMATCHED PRECISION, CONSISTENCY, AND DURABILITY

Douglas Barrels carry the ultra-rifled designation that represents the immense precision of the rifle bore dimensions. Backed by over seven decades of first-place finishes and trophy hunts our gun barrels enhance the accuracy, precision, and reliability of firearms for long-range marksmen, professional shooters, avid hunters, and members of the US Armed Forces.

### BASIC BARREL BLANK

A Douglas BASIC Barrel Blank is a rifled bar of steel with a rough lathed-turned finish that is cylindrical in shape and has been stress relieved. Our BASIC Barrels are available in lengths of 25.5", 27.5", 29.5", and 31.5" (some calibers can be made in lengths of 35.5"). The BASIC barrel will have a slight variance in diameter but will always finish with at least a 1.250" OD. The Douglas BASIC Barrel is an ideal choice for gunsmiths wanting to contour their own barrels.

### CONTOURED BARREL BLANK

A Douglas Contoured Barrel Blank is machine finished on our CNC lathe to the customers' specifications. Our Contoured barrel arrives approximately 1.5" longer than the chart dimensions to allow customers to thread and crown the barrel themselves. All Contoured barrels are polished to a 180-grit belt finish. The Douglas Contoured Barrel is intended for customers who wish to perform the final centering and shape of their barrel.

### FINISHED, TURNED AND CHAMBERED

A Douglas Finished, Turned and Chambered barrel will be contoured, threaded, chambered and crowned to the customers' specifications. Our machinists will take a finished Douglas barrel and cut in the proper threading for the specified rifle action, chamber for the specific cartridge, and crown the barrel. The chamber in this barrel is finished to the state that a finish reamer is not required. All customers purchasing this variant should be aware that you will need to make a slight cut on the breech with a lathe and have an appropriate method to gauge headspace. DO NOT FIRE this specific barrel without making the required adjustments. We include a set of detailed instructions with each order that outlines this process. Please contact Douglas Barrels for an additional set of instructions if you misplace the included documentation. *Requires fitting by gunsmith.*

### REBARRELING

When Rebarreling with Douglas, we do all the work. We approach each rebarreling project the same way we do our custom ultra-rifled barrels. Starting with our premium quality barrel blanks bored to exacting specifications, we work diligently to match the specifications outlined in your order or replicate the original barrel should you choose to provide it. Many customers send us their action and we then rebarrel to their rifle's original specifications. Once we are finished, the barreled action as well as their original barrel (if so desired) will be returned to the customer. The Douglas Rebarrel can be immediately put in the original stock and it's ready to go. *Fit to your action by Douglas.*
