 CLEAN · LUBRICATE · PROTECT

**IN A SINGLE WIPE  
 AT A CLIP**

## ← MODERNIZING GUN MAINTENANCE →

Regular gun cleaning is essential for ensuring reliability, safety, and the longevity of a firearm. A clean firearm also helps preserve accuracy and resale value, and reduces the risk of jam when you need them for duty, hunting or life-saving events by ensuring moving parts function smoothly and are properly lubricated.

Cleaning could be a grinding task: by traditional methods, one would need to apply different cleaning products, involving different set of tools, sometimes overuse of oils causes spill, leaving a mess on the working bench. The acrid smells from the chemicals aren't helping, along with cloth made with traditional materials leaving fabric residues for additional cleaning steps.

That's why CLIP TECH offers our mineral oil based CLP oil paired with our high-quality fiber wipe to simplify and streamline the gun maintenance processes. A pre-saturated CLIP wipe contains the oil formula to clean, lubricate and protect your firearms in a single wipe, creating a one-stop solution to gun maintenance.

## ← OUR ADVANTAGE →

Individually packaged wipes, easy to transport

Onewipe, multi-functions, one step maintenance

High-quality fiber wipe, durable and soft, safe to use on all surface

CLP formula performs in harsh conditions

Oil has no strong odor, cause less irritation on skin

fiber wipe absorbs oil better and leaves minimal microfiber residue behind

## ← FUNCTION →

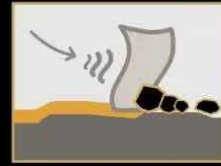

Our in-house technologies create ultrafine long fibers, soft and non-abrasive to surfaces, while being stronger than ordinary fabrics

The fibers have non-circular cross-sections, offering strong wiping ability and effectively removing gunpowder residues from firearm surfaces.

The ultra thin and dense fiber will have very little edge fraying or shedding, so the wiping process will not cause secondary contamination to the firearm due to microfiber residues.

The ultrafine fiber structure gives it superior oil absorption, allowing enough oil for the cleaning and leaving a lubrication and protection coating.
