

## Ambient Arms Redefines Suppressor Performance with Groundbreaking Ambient Intake™ Technology

Richardson, Texas — January 2, 2026 — Ambient Arms has officially launched as a U.S.-based suppressor manufacturer, driven by purposeful engineering, uncompromising real-world performance, and a commitment to reimagining suppressor design at first principles.

At the core of every Ambient suppressor is the patent-pending **Ambient Intake™ System** — a revolutionary approach that actively draws cool outside air into the suppressor, through low pressure regions, and mixes that outside air with the hot propellant gasses inside the suppressor. Ambient's innovations dramatically lowers operating temperatures (by up to 75% over conventional suppressors), reduces blowback, enhances durability, and delivers superior accuracy and sound suppression without conventional flow-through compromises.

Ambient Arms debuts with three purposefully engineered models:

- The **EXO 5.56**, a full-size titanium suppressor built for unmatched temperature regulation, rugged durability, and extreme sound suppression.
- The **EXO 5.56i MINI**, a compact super alloy steel option that brings the same cooling and mitigation benefits in a shorter, more maneuverable package with an emphasis on signature reduction.
- The **STRATOS .22**, a lightweight titanium suppressor offering exceptional versatility, ease of use, ruggedness, and clean performance across .22-caliber platforms.

Founded on the principle that suppressors should solve real problems — Ambient Arms prioritizes thermal management, rugged durability, and shooter-centric usability over fleeting trends or unnecessary complexity.

Every Ambient Arms suppressor is designed and manufactured in the United States and is available exclusively through SilencerShop.
