PRESS RELEASE

FOR IMMEDIATE RELEASE

CLARUS II

NEXT-GENERATION IN-EAR COMMUNICATIONS THAT ENHANCE HEARING, PROTECT HEARING, AND ENABLE CLEAR SPEECH IN THE TOUGHEST ENVIRONMENTS.

Silynx Communications, a global leader in advanced tactical hearing protection and communication systems, will debut its next-generation CLARUS II at SHOT Show 2026 in Las Vegas, Nevada (Booth #60403).

The new system redefines what operators can expect from a compact in-ear tactical communications headset — combining hearing enhancement, hearing protection, and unparalleled voice clarity in a rugged MIL-STD-qualified platform built for the harshest missions.

INTRO

HEAR MORE. PROTECT MORE. COMMUNICATE BETTER.

Building on Silynx's legacy of "Protection from Within™", the CLARUS II combines active hearing enhancement, certified impulse noise protection, and crystal-clear digital communications in a compact MIL-STD headset system engineered for the harshest field conditions.

Users can hear ambient sounds with precision, communicate clearly through in-ear microphones, and stay protected from hazardous impulse noise - all at once.

BENEFITS

NEW FEATURES & BREAKTHROUGH CAPABILITIES

Drone Detection Technology - Enhanced acoustic processing amplifies and isolates drone-specific frequencies, giving operators early audio warning of UAVs at a distance.

Dual-Radio Integration - Two independent downloads, eliminating the need for external splitters.
Smart Radio Detection - Automatic voice prompts identify connected radios for faster, error-free setup.

Silent Communication - Transmit prerecorded messages without speaking. Ideal for covert operations, and high-noise zones.

Whisper mode - Optimized for quiet environments - transmits your voice clearly even when speaking softly.

Leak Test - Automatically or manually checks the headset earbud seal, alerting the user to indicate optimal passive sound protection and communication clarity.

BUILT FOR THE MISSION

MIL-STD-810 COMPLIANT

Rugged, waterproof, and fully compliant with MIL-STD-810 standards, the CLARUS II is engineered for uncompromising performance in combat, maritime, airborne, and tactical law-enforcement operations. Its ergonomic design ensures comfort during long missions, while Silynx's proven in-ear microphone technology guarantees clear, secure communications — even under fire.

MEET SILYNX AT SHOT SHOW 2026

Join Silynx Communications, Inc. at Booth #60403, January 20–23, 2026, Las Vegas, NV, to experience hands-on demonstrations of the CLARUS II and the company's full line of tactical communications systems.

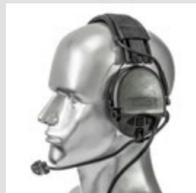

ABOUT

SILYNX COMMUNICATIONS

Silynx Communications designs and manufactures advanced, ruggedized in-ear communication systems that protect hearing while enabling situational awareness and crystal-clear communication. For over a decade, Silynx systems have supported elite military, law-enforcement, and security units worldwide.
